Michał Miłek

I am a beginner programmer who is aiming to become a front-end developer. I started my programming adventure in August 2022. I started my learning journey with C++ and JavaScript, but decided to develop in the latter direction. I try to solve any problems with logical thinking. I am hungry for knowledge and try to absorb information as quickly as possible. Currently, I am looking for my first commercial experience with front end development.

Work History

I am looking for my first commercial experience.

Education

2017-10
- 2022-07

Manufacturing management and engineering, Master Engineer

Rzeszów University of Technology, Rzeszów

Projects

MovieApp - The application fetches data from the TMDB API and uses Firebase, displays information about videos divided into categories, has the ability to search for a video and authenticate with Google and Facebook.

Github Finder - A simple application running on GithubAPI to find a user. The application has the ability to change its theme or language by using ContextAPI.

Blog - Application made with Sanity as backend. Combined administration panel from Sanity with the frontend part of the application in one folder. Verification from the sanity.

Currently I am working on TypeScript combined with redux toolkit application.
